

# Sectéra® Cube

## Multi-Access Handset Device for the Sectéra vIPer™ Secure Phone

Provides access to three total handsets connected to a single vIPer phone

Supports non-secure, secure, VoIP and analog networks

Ideal for teleconferencing in office or mobile environment

### Applications

### Overview

The Sectéra Cube is the latest enhancement for the Sectéra product portfolio, built to support Sectéra vIPer Universal Secure Phones. The Sectéra Cube provides access for three total handsets to be connected to a single vIPer phone. This enables multiple handset users to access a single phone line while in the same room. This accessory supports the vIPer Phone in any operational mode including both non-secure and secure, end-to-end Voice over IP (VoIP) and PTSN/analog networks.

The Sectéra Cube was developed in response to the need for call conferencing in environments where using speaker is not acceptable. Ideal for teleconferencing in an office or mobile environment, this solution provides ease of access for up to three users.

### Included in Sectéra® Cube Kit

The Sectéra Cube and vIPer phone bundle provides high-quality, clear voice and data communications for VoIP and analog networks. The Sectéra vIPer phone is the only VoIP phone certified to protect information classified Top Secret/SCI and below. The vIPer phone supports multiple key-sets for U.S. government sponsored interoperability (e.g., FYEY, NATO and coalition partners).

Simple to install, the Sectéra Cube can be set up out of the box within minutes to operate with new and/or existing vIPer phones. The Sectéra Cube includes:

- Sectéra Cube
- Two Standard Handsets
- Three Coiled Handset Cords
- Sectéra vIPer Flat Phone Cord

### Sectéra Approved Products

It is important for users to ensure their Sectéra solutions are integrated and used with approved ancillary equipment to comply with mission requirements. The Sectéra Cube is just one of the ancillary products that has been developed, tested and validated by General Dynamics Mission Systems for use with Sectéra devices. This reduces risks associated with interoperability, redundancy, environmental factors and even warranty coverage. Please refer to [www.gdmissionsystems.com/SecureVoice](http://www.gdmissionsystems.com/SecureVoice) for a complete list of ancillary items available for purchase and supported by General Dynamics.
