

# End-of-Repair Support Announcement for CM-200, CM-400 and CM-50/51 series Air Traffic Control (ATC) Radios

## Summary

General Dynamics Mission Systems announces a change in repair support for the CM-200, CM-400 and CM-50/51 series Air Traffic Control (ATC) Radios.

General Dynamics Mission Systems has maintained supportability on the CM-200, CM-400 and CM-50/51 series ATC radios 10 years after ending production. However, **General Dynamics Mission Systems will no longer be able to service repairs, offer accessory options, or provide updates/upgrades and technical assistance effective March 31, 2020** due to component availability issues and the depletion of finished goods.

We encourage our user community to learn more about our current ATC radios, the [CM-300/350 \(V2\) series](#), when considering replacement radios. The CM-300/350 (V2) radios provide over 400,000 hours of Mean Time Between Failure (MTBF) and far exceed the capability of the CM-200/400/50/51 radios. Users will see improved co-site performance, have the ability to add new features via software updates, and will have the option to utilize either analog or IP functionality. More information on the CM-300/350 (V2) radio products can be found at [www.gdmissionsystems.com/ATC](http://www.gdmissionsystems.com/ATC).
