

End-of-Repair Support Announcement for URC-200 (V1) Line-of-Sight (LOS) Transceivers

Summary

General Dynamics Mission Systems announces a change in repair support for the URC-200 (V1) LOS Transceivers.

General Dynamics Mission Systems has maintained supportability on the URC-200 (V1) radios 10+ years after ending production. However, **General Dynamics Mission Systems will no longer be able to service repairs, offer accessory options, or provide updates/upgrades and technical assistance effective September 30, 2020** due to component availability issues and the depletion of finished goods.

We encourage our user community to learn more about our current URC line of radios, the URC-200 (V2) Transceiver, or our new URC-300 Transceiver, when considering replacement radios. Users will see an increase in performance and functionality in both radios. More information on the URC radio products can be found at www.gdmissionsystems.com/LOS.

End of Life Schedule

The following End of Support timetable identifies the URC radio replacements for your convenience. Once a product has reached its End of Support date, General Dynamics Mission Systems will no longer provide repair services.

Product Line	Part Number(s)	End-of-Support Date	Replacement Product
URC-200 (V1) Transceiver	01-P36744M001	30 September 2020	URC-200 (V2) Transceiver 01-P36744M003, URC-300 Transceiver, 01-P58564R001
